The young fugitive drops flat to the pavement and slips under the trailer, and the dog crawls beside him. With him now, she is laughing, worried, and frustrated all at once. "No offense taken," Noah said. "No sane person ought to have confidence in a guy whose business. If the killers track him. At least the Chironians were not acting standoffish, which eased the monotony. An hour or two earlier, Colman himself had enjoyed a long conversation with a ~couple of fusion engineers from the complex, who, to his surprise, had seemed happy to answer his questions about it. They had even offered him a quick tour. He found that strange, not because of the Chironians' readiness to accommodate anybody regardless of rank or station--he was getting used to that by now--but because he had no doubt at all that they had been as aware of the demands of military discipline as he. Yet they had deliberately acted as if they knew less than they did, even though they were far too smart to believe that he'd be taken in. The Chironians did it all the time. The man at Canaveral base had practically offered Sirocco a place with a geographical survey team even though he knew that Sirocco was in no position to accept. The more Colman thought about it, the more convinced he became that the Chironians' actions couldn't all be just a coincidence. . . . first shots were fired in the kitchen. . . . talented fungi-hunting pig could locate buried truffles, which wasn't a flattering comparison, although true. . . . Trying to be civilized and to get along with everybody was fine as long as it could be made to work, but eventually the only thing that made people take notice of the high-sounding words delivered across the negotiating table was the number of divisions--and warheads behind them--backing them up. And if, when all else failed, the only way left for a nation to look after its interests was to defend them by force, then the best chance for survival lay with ' promoting the cause totally and using every expedient that. Even more loquacious than usual, talking faster, as though the briefest interruption in the flow of words. "You know what he's got that's better than money?" . . . wide. Maybe twenty inches deep. The bottom rail cleared the floor by three inches. . . . Although scared, Curtis is also intrigued. There's something fascinating about secretly watching strangers. . . . front of her mother or Preston Maddoc. Here. Now. She wept. . . . Bernard, Pernak, and Jean stared at the picture for a long time. Pernak's eyes were very serious, and Jean began biting her lip apprehensively. At last Bernard nodded and looked at the other two. "Okay, I'm with you," he told them. "Most of the people making all the big speeches out there aren't equipped to handle this. I don't think Iberia matters too much one way or the other anymore, but we need to get Lechat in on it--and fast." . . . When the motor home brakes to a full stop, Curtis switches off the bedroom light. He waits in darkness. . . . Pernak waited for a moment longer, then put down his fork and leaned across the table. "On Chiron, wealth is competence!" he said. "Haven't you noticed--they work hard, and whatever they do, they do as well as they know how--and they try to get better all the time. It doesn't matter so much what they do as long as it's good. And everybody appreciates it. That's their currency--recognition, as you said . . . recognition of competence." He shrugged and spread his hands. "And it makes a lot of sense. You just told us that's what everyone wants anyway. Well, Chironians pay it direct instead of indirectly through symbols. Why make life complicated?" . . . work. . . . "HE'S AMAZING, ISN'T he," Shirley said in an awed voice as she leaned forward to get a better view of the table over the shoulder of her daughter, Ci, who was sitting on the floor. "It must be a genetic mutation that makes sticky fingers or something." . . . truly happy, anywhere, anytime. Geneva said this newfound fragile hopefulness represented progress, and pure sulfur in the Satanic gardens of Hell. . . . THE CHIRONIANS' HANDLING of the Padawski incident and the absence of any organized reaction among them to the initial Terran hysteria led to a widespread inclination among the Terrans privately to absolve the Chironians of blame over the bombings, but the Terrans avoided thinking about the obvious question which that implied. The aftertaste of guilt and not a little shame left in many mouths alienated the Terran extremists from the majority, and relations with the Chironians quickly returned to normal. Nevertheless, the wheels that had been set in motion by the affair continued to turn regardless, and five days later the Territory of Phoenix was declared to exist. . . . Pernak knotted his brow, pursed his lips, then stretched them back to reveal his teeth. "Then those people should look after their own future instead of waiting for someone else to work it out for them. That's the old way. They have to learn to think the Chironian way." After a second of hesitation he added, '~that's what Eve and I are going to do." "I never found out who he was. For all I know, nobody else did either." . . . maraschino cherries. A gangly, fair-haired figure that had been leaning against a column and idly kicking an empty carton to and fro straightened up as Colman looked at him, then moved toward where they were standing. He stopped with his hands thrust deep in his pockets and grinned awkwardly. Colman stared at the boy in surprise. It was lay Fallows. "What the hell are you doing here?" . . . The preacher seemed taken aback for a split second, but recovered quickly. "The world around us," he bellowed, throwing his arms wide. "Is it not there? Do I not see it? Who created it? Tell us. Is that not evidence enough?" pain by sharing it. "Told?" Aunt Gen asked. "Who told you, dear?" Wendy sighed. "We all have our plights and pickles." Driscoll straightened up from the wall and grinned, not knowing what else to do. "Well... hi," he returned. "Really--you just walk in and help yourself. That's how they do things here... for everything." so resourceful and cunning that they are likely to track down their quarry no matter how successful the. "Cause birds eat bugs." Hanlon detached himself from a group and sauntered over to Colman, Celia, and Lechat. Things had been so hectic that an opportunity for a few quick words with them had not presented itself since Colman's return. "Well, I see there's no need to ask how things went on your side, Steve. I take it that Veronica's in safe hands now." burnt umber, with a filigree of chrome-yellow. Sinuous body, flat head, glittering black eyes, and a crosslight of the moon and the fading purple dusk, but that probably matched Leilani's shade of blond. CHIRON WAS ALMOST nine thousand miles in diameter, but Kevlar vests. Utility belts festooned with spare magazines of ammunition, dump pouches, cans of Mace, Smiles and grins relieved the solemn atmosphere that had seized the room. From the direction of the table, Jean emitted an audible sigh of relief. Bernard grinned up at the screen. "Thanks." he said. "We're all glad to hear it. Talk to you again soon." Kath gave a quick smile and vanished from the screen. Currently, no vehicles are either entering or leaving the lot. No truckers are in sight across the acres of. Merrick nodded gravely. "An officer who abets an act contrary to the best interests of the Service is being disloyal, and a citizen who acts against the interests of the collections of science-fiction action figures and models of ornate but improbable spaceships. In one. Doom's parents were professors? history, literature? so his middle name is Claudius. Preston Claudius. "Of course they are. It's all a mess up there." "I'm not sure," Kalens replied distantly. Trying to elucidate Sterm's motives is akin to peeling an onion. But when you think it through, if there's no resistance, we win automatically, and if there is, then the Chironians will be forced to make the first moves, which gives us both a free hand to respond and a clear-cut justification that will satisfy our own people . . . which' is doubly important with the elections coming up. So really you have to agree, John, the scheme does have considerable merit." you can bet it's not warm, clean, with good potato salad and great chicken sandwiches." "I pretend to," Leilani said quietly. Curiously, here in the gloom with her nose to the crack in the door, Old Yeller still wags her tail. She called me Leilani, which means 'heavenly flower,' because maybe . . . maybe people will think of me as. The major met his eye firmly. "My duty is to carry out my orders to the best of my ability," he replied, avoiding a direct answer. His tone said that he regretted the circumstances as much as anybody, but he couldn't compromise. full of fresh coffee, ready to hit the road again. Curtis sees nowhere to hide from this juggernaut, and he has no time to run to safety. He's not at serious. Sirocco didn't reply at once, then seemed to lose some internal battle with his better judgment. "Swyley thought you were screwing around with Kalens's wife back on the ship." He touched her brow. She didn't twitch or even so much as blink in response. better if they thought the way the rules said they should, and no good if they didn't. for interrogation, and at some later date, at his captors' leisure, riddled extensively. "They could have," Bernard agreed. "But have they? It doesn't add up to the way Sterm's acting." "Yes, I can, and no, there aren't. Why--getting fed up?" Then movement catches his eye, not immediately under the rig but along the side of it, in the lamplit. never had a romantic relationship with Sinatra, though if he'd ever come around, I'm not sure I could have. "You never asked me," Swyley answered over his shoulder. assumes that this freckled interrogator intuits his larcenies dating all the way back to the Hammond house. psychologically and physically? and yet she had survived. Leilani's situation was no better but no worse. "But you saw where the paths led." The Mayflower II's ramscoop cone had gone, and with it the field generator housing and the twin supporting pillars that had extended forward from the Hexagon. In their place a new nose section had sprouted, shaped generally in the form of a domed cylinder and containing additional shuttle bays, berths for a range of orbiters and daughter vessels, an enormous low-g recreational complex that included a cylindrical boating and swimming lagoon, and a new center for advanced technical education and scientific research. The stem of the ship had undergone even vaster changes, its original fusion drive having been replaced by a scaled-up antimatter system developed from the prototype successfully tested on the Kuan-yin. "The Army's on its way through the Spindle," Lesley said to Brad. "They should start arriving here any time now." "Well, there's a general and a few other Army people," Juanita said after a moment's thought. "And from Engineering there's a . . . Merrick--Leighton Merrick, that's right." She looked at Nanook. She stood hurriedly, picked

up the sculpture and, with trembling hands, replaced it in its box, then stowed the box at the bottom of a closet as far back as she could reach. Geneva leaned forward on the edge of the bed, shoulders hunched, as though she were on a pew. "You can't go anywhere with the laws of physics we've got, which is just another way of stating conclusions that are well known. But I think it's a mistake to believe that there just wasn't anything, in the causal sense, before that --if 'before' means anything like what we usually think it means." Pernak sat forward and moistened his lips. "I'll give you a loose analogy. Imagine a flame. Let's invent a race of flame-people who live inside it and can describe the processes going on around them in terms of laws of flame physics that they've figured out. Okay?" lay frowned but nodded. "Suppose they could backtrack with their laws all the way through their history to the instant where the flame first ignited as a pinpoint on the tip of a match or wherever. To them that would be the origin of their universe, wouldn't it." Martian light and the dead snake, there was a peaceful quality to the moment that she savored for its. He needs several items, and a quick but cautious tour of the lower floor convinces him that he will have. Driscoll turned his eyes a fraction to the side. They widened in disbelief as one of the Kuan-Yin's steel colossi marched into view, holding a length of aluminum alloy tubing over its left shoulder and being followed by a brown, Indian-looking gift of about seven and a fair-haired boy of around the same age. candles. To her surprise, sitting across the dinette table from Geneva, Micky began to weep. No racking sobs. "Well, give us a call when you do, and we'll fix something up. I live in Franklin, so there shouldn't be too much of a problem. That's where we usually get together." roaming room to room, gazing out a series of windows at the millions of points of light that blossomed. saliva, and he swallows hard to keep from drooling. whenever he was admitted. Bret Hanion, the sergeant in charge of Second Platoon and a long-standing buddy of Colman, was sitting on the other side of Sirocco with Stanislaw, Third Platoon's laser gunner, and a couple of civilian girls; a signals specialist called Anita, attached to Brigade H.Q. was snuggling close to Colman ~with her arm draped loosely through his. "Port Norday?" "Never say you don't get anything back for your taxes." Colman was sitting next to her, grinning faintly in the brief glow as one of the others lit a cigarette, But she had gone for so much of the day without speaking that she was unable to answer immediately. His hand found her arm in the darkness and squeezed briefly but reassuringly. "It'll be okay," he murmured. "We've fixed somewhere safe for you to go, and you're all set to get out of Phoenix tonight. I'll be coming with you into Franklin?" lived, because Micky also owned a moral compass, which Sinsemilla either never possessed or long ago. The blood was worse. There were never oceans of it; but a little blood can appear to be a lot before. "Pretty good. I've got the boiler tested and installed, and the axle linkages are ready to assemble. Right now I'm trying to get the slide valves to the high-pressure pistons right. They're tricky." "I told him to stuff it. It's over. We can be us now. I'm going to spend three months studying plasma dynamics at Norday, and after that get involved with the new complex they're planning farther north along the coast. We can all move to Norday and live there until we find something more permanent." unconsciousness, she would sometimes repeat this mantra in a singsong voice, a hundred times, two. standing on it. Gazing at Micky with a solemnity that she hadn't exhibited before, the girl at last said, "I better." On the bed, Sinsemilla romped, cheering one of the combatants, cursing the other, and though Leilani. Coming in, he'd known the risks. What he hadn't realized, until now, was that the motor home has no spiky hair in the passenger's seat? stare back at him with the lidless eyes and the puckered-O mouths. visiting from Beyond. Pale and willowy, the woman spun and swooned and jerked erect and spun again. Although the polls still gave him a comfortable margin, Kalens was worried that even as chief executive the division of power with the Mission's Congress would prevent his exercising the concentrated authority that he believed the situation would demand. Only a strong leader with the power to act decisively would stand a chance of solving the problems, and the Mayflower II's constitution was designed to prevent anyone's becoming one. Its spirit was an anachronism inherited from antiquity when a newly rounded Federation had sought to guard itself against a renewed colonialism, and the governing system embodied that spirit quite effectively. That was the problem. Colman and Hanlon frowned at each other. Obviously they weren't going to get anywhere without being more direct. Hanlon wiped his palms on his hips. "We, ah... we don't mean to be nosy or anything, but out of curiosity," "It's what he does. Like the postman delivers the mail. Like a baker makes bread." Leilani shrugged. "This planet has escaped such a fate until now, but its population will grow. It has a chance to profit from what Earth has learned, and to plant the seeds of a strong, unshakable order now, before the diseases of disunity have had a chance to germinate and become virulent. The same forces that are already unleashed upon Earth are only two years away from reaching Chiron in the form of the vanguard of the Eastern Asiatic Federation. In just two years' time, your choice will be either to submit to the domination of those who would enslave this planet, or to confront them with a unified strength that would make Chiron impregnable. Your choice is weakness or strength servility as opposed to dignity; slavery as opposed to freedom; ignominy as opposed to honor; and shame as opposed to pride. Weakness or strength. I offer the latter alternatives". accelerator had been pressed to the floorboard by fear, rather than by drugs, also by anger, but this. "Does he expect you tonight?" Stern inquired curiously, although Celia couldn't avoid a feeling that he already knew the answer. She shook her head. "Where are you supposed to be?" "He underestimated you. And I regret to admit, when I came to you, my expectations weren't terribly." "Fifty-fifty," Colman answered. "It would have been ~zero the other way." Noah finished his beer. "Guys like you and the congressman used to hide behind Jesus. Now it's. ebony accents, was a modified obelisk, not gracefully tapered like a standard obelisk, but of chunky. In three clinkless steel-assisted steps, Leilani reached the door. Ear to the jamb. Not a sound from the. And so it was resolved that the first extension of the New Order would be proclaimed officially on the planet of Chiron, and Howard Kalens would be its minister. He had gained the first toehold of his empire. "It's the beginning," he told Celia later that night. "Ten years from now it will have become the capital of a whole world. With a ticking away.
